

## ASL CONSULTANCY LIMITED

We are a new and dynamic Engineering Consultancy, focusing on noise and vibration problems and solutions. Due to our rapidly growing workload, we are looking to grow our existing team of experts.

Our area of work includes occupational noise, hand-arm vibration, whole-body vibration and environmental noise.

We are based in Central Scotland, but work across the UK and we will endeavour to accommodate the needs of the right candidate.

### **Principal Engineer**

We are looking to recruit an experienced engineer working at a professional level. Ideally you would be a Chartered member of a professional institute (IOA / IMechE). You should have significant experience in the field of occupational noise, hand-arm and whole-body vibration. Experience in environmental noise is desirable, but not essential, as training will be given.

### **Graduate Trainee / Junior Engineer**

We are also looking to recruit either someone who is about to, or has recently graduated with a degree in Acoustics, Mechanical Engineering, Physics or similar. We would be looking to develop you in the area of noise and vibration consultancy; developing you so that you are competently able to carry out occupational noise, hand-arm and whole-body vibration assessments in a timely way and to take on increased responsibilities as your skills and experience grow. Training will be encouraged as will the willingness to seek Chartered status.

A remuneration package for each role will be in line with qualifications and experience.
