

## **NOISE IN THE BUILT ENVIRONMENT – AUTHORS LIST**

### **PLENARY PAPERS:**

Acoustical exploitation of periodic structures in the urban environment  
Keith Attenborough, The Open University, UK

Recent advances in sound quality  
Patrick Van de Ponselee, LMS International

Soundscapes: where are we?  
Jian Kang, Sheffield University

Recent advances in noise barriers testing, qualifying and standardisation  
Massimo Garai

### **Tyndall Medal Lecture**

Some interesting topics in porous media acoustics  
Olga Umnova, University of Salford

---

### **A**

Legislation and policy regarding silent pavements on motorways in the Netherlands: past, present and future  
Wiebe Alberts, Rijkswaterstat, The Netherlands

### **B**

Noise control of outdoor music festivals  
Claude Bataillie, Provincial Institute of Environmental Research, Belgium

Social deprivation and accessibility to quiet areas in Southampton  
Juan Battaner-Moro, Southampton Solent University, UK

Methods to measure the noisiness of roads  
Anneleen Bergiers, Belgium Road Research Centre, Belgium

Effect of ground scattering on noise barriers efficiency  
Alexis Billon, University of Liege, Belgium

The use of statistical energy analysis (SEA) for the prediction of the sound reduction index of double systems with large cavity  
Marcelo Blasco, Blasco Ltd, Belgium

The influence of trip behaviour on assessment of the quality of the living environment  
Dick Botteldooren, Ghent University, Belgium

Towards a measuring unit for soundscape based on white noise  
M Boubezari, Universidade Technica de Lisboa, Portugal

Quiet areas and the need for quietness  
Hester Booi, OS Amsterdam, The Netherlands

### **C**

QUIESST: toward a better knowledge and understanding of how efficient noise barriers could actually be  
Jean-Pierre Clairboise, A-tech Acoustic Technologies

A preliminary survey of noise levels in UK secondary schools  
Robert Conetta, London South Bank University, UK

Measurement of noise emission of Hungarian roads using the CPX method  
Marco Conter, Austrian Institute of Technology, Austria

Secondary schools students' perceptions of their acoustic environment. Results of pilot research in English secondary schools  
Daniel Connolly, Institute of Education, London

### **D**

An orchestra's noise exposure  
Stephen Dance, London South Bank University, UK

Advances in roof top wind turbines and their installation

Stephen Dance, London South Bank University, UK

Combined assessment of noise and air pollution caused by road traffic  
Bert De Coensel, Ghent University, Belgium

Outdoor noise-contribution to indoor noise levels in the city of Girona  
Alexandre Deltell, University of Girona, Spain

After 20 years of in situ measurements on noise barriers  
Patrick Demizieux, Laboratoire Régional des Ponts et Chaussées de Strasbourg, France

Solutions for the improvement of the acoustical quality of interior space. Acoustic study of a small concert hall  
Dušan Dlhý, Slovak University of Technology, Slovak Republic

Realizations – classroom acoustics  
Jan Dolejši, Studio D – akustika, The Czech Republic

An investigation into the accuracy of an acoustic software model in the design of a professional music rehearsal and recording facility  
Nick Durup, Sharps Redmore Partnership

**E**  
Real-time auralization of industrial noise  
J J Embrechts, University of Liege, Belgium

**F**  
A comparative study of the efficiency of vibration and re-radiated noise from underground railway traffic  
Peter Fiala, Budapest University of Technology and Economics, Hungary

Auralization and psychoacoustic analysis of virtual road traffic scenarios  
Andre Fiebig, HEAD acoustics, Germany

Noise and air pollution correlation and its determination in the city of Girona  
Maria Foraster, Centre for Research in Environmental Epidemiology, Spain

Modelling of the dynamic interaction of tunnel- or longitudinal trench-structures in the half space by the application of a set of various fundamental solutions  
Georg Frühe, Technische Universität München, Germany

**G**  
Assessment of rainfall noise through reciprocity measurements  
Nathalie Geebelen, Cauberg-Huygen Consulting Engineers, Netherlands

Night-time noise offence – the research behind the UK permitted noise level adopted in the UK  
Jim Griffiths, Vanguardia Consulting, UK

The PERSUADE project: developing the poro-elastic road surface to a powerful tool in traffic noise abatement  
Luc Goubert, Belgium Road Research Centre, Belgium

**H**  
Sound reduction of open noise screens  
Jan Hardlooper, Caubery-Huygen Consulting Engineering, Netherlands

Acoustic design artifacts and methods for urban soundscapes  
Bjorn Hellstrom, University College of Arts, Crafts & Design, Sweden

Soundscape without picture – listening to the built environment with blind people  
Ann Heylinghen, KU Leuven, Belgium

Coherent and incoherent reflections at building facades  
Kurt Heutschui, EMPA, Switzerland

Numerical study to the effects of façade properties on sound propagation to a three-dimensional urban courtyard  
Maarten Hornikx, KU Leuven, Belgium

**J**  
School acoustics design for excellence – when BB93 just isn't good enough  
Adrian James, Adrian James Acoustics, UK

CAD and BIM – application possibilities in building physics  
Martin Jamnicky, Slovak University of Technology, Slovakia

## **K**

Four 67T standby generators on the roofs of a long span steel structure – is this a good idea?  
Roger Kelly, CDM UK

First principles for sound event recognition for soundscape research  
Dirkjan Krijnders, INCAS, Netherlands

Ground-borne vibration from underground railways: some commonly-made modelling assumptions and their associated inaccuracies and uncertainties  
Kirsty Kuo, University of Cambridge, UK

## **L**

Computational model for long-range sound propagation over urban environments  
Thomas Leissing, Universite Paris-Est, France

The effects of noise calculation methods on annoyance and health indicators  
Peter Lercher, Medical University Innsbruck

Comparison of static and dynamic approaches for urban traffic noise assessment: a case of study in Lyon (France)  
Ludoviv Leclercq, University of Lyon, France

Investigation on tyre and vehicle speed effect on tyre/road noise change  
Mingliang Li, Delft University

## **M**

Acoustic predictions of high power sound systems – software modelling and verification measurements  
Mark Murphy, Vanguardia Consulting, UK

The performance of quieter surfaces over time  
Matthew Muirhead, TRL, UK

~~Noise barriers on England's strategic road network: long term performance and asset management~~  
~~Phil Morgan, TRL, UK – Withdrawn 2.3.10~~

## **N**

Façade natural ventilation – an element of sustainable acoustic design  
Pedro Novo, Max Fordham, UK

Updating the electronic noise data reporting mechanism (ENDRM) to support member state reporting under the Environmental Noise Directive  
Colin Nugent, European Environment Agency

## **O**

Imitating human auditory processing for urban soundscape measurement  
Damiano Oldoni, Ghent University, Belgium

Lisbon Metro floating slab  
Koen Ophalffens, CDM, Belgium

Reduced vibration in continuously supported track  
Koen Ophalffens, CDM, Belgium

## **P**

New Dutch legislation and an efficiency criteria for measures around motorways  
Cristo Padmose, Padmos Geluidadvies, The Netherlands

BB93: past, present an future  
Andrew Parkin, RPS Group, UK

Factors influencing the human response to vibration from railways in residential environments  
Eulália Peris, University of Salford, UK

Guided waves effects on the low frequency sound propagation within a street canyon  
Adrien Pelat, LAUM, CNRS, France

A numerical study of the use of acoustic diffusers to reduce noise in urban areas

Judicael Picaut, Laboratoire Central des Ponts et Chaussées, France

## **R**

Vibration mitigation for metroline on soft clay  
Karin M Rothschild, Norwegian Geotechnical Institute, Norway

Acoustical assessment of urban public places  
Monika Rychtarikova & Gerrit Vermeir, KU Leuven, Belgium

## **S**

Quietening Open Spaces – towards sustainable city soundscapes  
Mary Stevens, Environmental Protection UK

A survey of noise levels in a post-surgical children's ward  
Nicola Shiers, London South Bank University, UK

Noise of high speed trains in the Netherlands: an exploration  
Eric Schreurs, National Institute for Public Health and the Environment, Netherlands

Model study of urban traffic noise and quiet facades, in relation with annoyance and sleep disturbance  
Erik Salomons, TNO Delft, The Netherlands

Effect of various vibration measure for dwellings along the railway track in Utrecht  
Herke Stuit, Movares, The Netherlands

## **T**

Urban square sound fields during rock concerts  
Pieter Thomas, Ghent University, Belgium

Sound signals to improve way-finding in a train station  
Julien Tardieu, IRCAM, France

## **V**

In situ determination of dynamic track parameters in order to model and predict noise and vibration reducing measures  
Ward Verhelst, Indrabel, Belgium

Source-received model of a building excited by ground borne vibration  
Michel Villot, CSTB, France

Airborne sound insulation from building partitions: point source and plane source model  
Hugo P Verhas, Independent Consultant, Belgium

Noise provoked tinnitus: maladaptive brainplasticity challenged  
Paul Van de Heyning, University of Antwerp, Belgium

Is there a right to be protected against noise  
Catherine Van de Heyning, University of Antwerp, Belgium

Building base isolation as a mitigation measure for rail traffic noise  
Michael Vanstraelen, CDM, Belgium

Assessment of an empirical prediction method for railway induced vibration by numerical simulations  
Hans Verbraken, KU Leuven, Belgium

The use of cheap microphones in extensive outdoor noise monitoring networks  
Timothy Van Renterghem, Ghent University, Belgium

## **W**

Impact of plants on the protection effect of noise barriers  
Markus Weber, Basler & Hofmann, Switzerland

Variation in field measurement of airborne sound insulation of lightweight timber floors  
Bill Whitefield, noise.co.uk & B M Gibbs, University of Liverpool

Case study evaluations of the influence of BB93 on the acoustic design of school buildings  
Mike Wood, University of Exeter, UK

Response to aircraft noise  
Colin Waters, Manchester Metropolitan University, UK

Case study evaluations of the influence of BB93 on the acoustic design of school buildings  
Mike Wood, University of Exeter, UK

Towards a sound diffusion characterization in the urban environment – from isovist tool to acoustic scattering indicator  
Philippe Woloszyn, Universite de Haute Bretagne, France

Validation of tranquillity rating method  
G Watts, University of Bradford, UK

**X**

Acoustic simulation of u-shaped long space in hospitals  
Hui Xie & Jian Kang, University of Sheffield

**Z**

A longitudinal study of hearing loss amongst classical musicians  
Georgia Zepidou, Sound Research Laboratories, UK

Acoustics uses for the iPhone  
John Zeman, London South Bank University, UK
