

## ACOUSTICAL ENGINEERS – Australia and Hong Kong

**WILKINSON MURRAY** is celebrating 50 years as one of Australia's leading acoustical and air quality consulting firms and requires additional engineering personnel to support the firm's expansion.

We have a commitment to excellence; we aim to build strong, trusting relationships with our clients; we seek out new ideas and leading-edge technology to meet clients' increasingly demanding requirements and we like to work in a relaxed environment with flexible working conditions.

We pride ourselves on a practical approach to consulting with a high priority placed on effective communication and client relations, so excellent written and presentation skills are also essential.

We are looking for the right people to fill these roles

### Hong Kong – Manager, Asia

The Hong Kong office is looking for the right person to manage the company's Asian business. The successful candidate should have at least 8 years experience in the acoustical field with experience in managing major acoustical design and assessment projects. The responsibilities of the position would include managing the office, managing all office projects and marketing the services in the Asian region. This is a senior position with great potential for advancement within the group.

### Australia – Acoustical Engineers (range of experience)

A professionally qualified person with at least 5 years experience in acoustics is required for the Sydney office. The duties will involve prediction, assessment and control of noise and vibration primarily from transportation projects.

A graduate or recent engineer with some experience is required for our expanding Brisbane office.

**Conditions & Applications** – Attractive performance based remuneration packages will be negotiated for the above positions.
