

Hann Tucker Associates

Consultants in Acoustics Noise & Vibration

With a history spanning 50 years, Hann Tucker is one of the original names in acoustic consultancy and one of the **largest independent acoustic consultancies** in the UK. We work with leading property developers and world-renowned architects designing **exceptional, award-winning** buildings.

We are expanding our both our Surrey and Manchester offices and are considering applicants for **graduate** roles and for **experienced consultants**.

This is an opportunity to be involved in some extraordinary projects. Projects that will see the creation of entirely new city neighbourhoods, skyscrapers, state of the art buildings for world-leading research, TV & music studios, conference halls, performance venues, multi-screen cinemas, luxury hotels, and more.

With help from our team, you would quickly develop into an accomplished consultant through hands-on project work involving site surveys, building design assessments (incl. 3D building/room acoustic modelling), technical report writing and building acoustic testing.

Successful **graduate** candidates are likely to be those who hold an acoustics related degree or the IoA Diploma and exude enthusiasm and motivation to work hard and be successful.

Candidates for the experienced consultant role should be able to demonstrate at least 1 years' experience in environmental and/or architectural acoustics and hold an AMIOA or MIOA membership.

We offer a competitive remuneration package as well as flexible and hybrid working options.

We are confident you would find the work varied, rewarding and fun.

To apply, please email your CV to Gareth Evans | g.evans@hanntucker.co.uk
