

Senior Acoustic Consultant – Flexible Location

The Exciting Opportunity:

If you are an Acoustic specialist who wants a career that plays to your strengths, keep reading. Join our team as a Senior Consultant within our Environmental Planning team and you will discover a culture focused on helping you flourish as a professional. It is intended that the role will offer the opportunity to progress your career as your experience grows.

Overview of Role:

You will take on a key role within the team, providing project support for onsite monitoring, as well as office-based tasks including 3D modelling and reporting. A key aspect of the role will be to support the growing Building Acoustics section of the Team, assisting the development and delivery of specialist building design projects in the residential, education, automotive and commercial sectors, along with supporting the Environmental section of the Team in the delivery of major infrastructure projects around the UK including HS2 and the Lower Thames Crossing Scheme.

As part of a growing and agile team our Environmental Planning team is involved in some of the UK's most complex, iconic and challenging projects that are diverse and technically demanding. These include major regeneration projects, garden cities, energy opportunities, infrastructure schemes and strategic land optimisation. This role can be based from our Warrington, Manchester, London, Birmingham or Leeds offices.

Your Day-to-Day:

As the role sits within the acoustics team the main tasks will centre around the undertaking and support of building acoustics assessments/reviews and monitoring surveys across the UK in accordance with appropriate Standards and Guidance. From time to time the role may also necessitate the use of 3-dimensional modelling using proprietary acoustic modelling software packages, so a knowledge of one or more of BASTION, ODEON, INSUL, CATT and the generalities of modelling would be beneficial.

In addition, support would be provided to the environmental part of the acoustics team undertaking environmental noise (and vibration) assessments supporting both EIA's and planning applications to appropriate Standards and Guidance. This typically necessitates the undertaking of detailed 3-dimensional modelling and as such a knowledge of one or more of SoundPLAN, IMMI or NoiseMAP 5.0 would be beneficial, along with an understanding of the generalities of 3D modelling techniques and issues.

What You have to Offer:

- A BSc degree (or similar) with a science, mathematics, environmental or acoustic focus/content;
- High level of proficiency in using the Microsoft Office suite, particularly Word and Excel;
- Knowledge and Experience of 3-dimensional modelling of noise;
- Highly motivated and committed;
- Good team player with excellent time management skills;
- A full UK driving license.

Why Arcadis:

Arcadis is the leading global natural and built asset design and consultancy firm working in partnership with our clients to deliver exceptional and sustainable outcomes through the application of planning, design, consultancy, engineering, project and management services. Arcadis differentiates through its talented and passionate people and its unique combination of capabilities covering the whole asset life cycle, its deep market sector insights and its ability to integrate health & safety and sustainability into the design and delivery of solutions across the globe.
