An Opportunity to Excel

Applied Acoustic Design has been established for over 30 years as a leading independent practice, providing practical, reliable and professional advice in a broad range of areas including; building developments, broadcasting, office fit-out, schools, hospitals and care centres, building services, environmental, industrial, automotive, aviation and planning.

Calibration Maintenance Manager – Field Services

Responsibilities include site selection, installation, calibration maintenance & data extraction (directly and via comms links) from AAD's mixed fleet of noise and vibration measurement instrumentation including, where necessary, the installation & maintenance of hybrid off-grid power supplies. Based from AAD's Staines office supporting sites predominantly but not exclusively in SE England, responsibilities include close liaison with AAD's staff engineers and clients, maintaining third party audited KPIs and formal monthly status reporting. Training will be customised according to experience."

We offer a **competitive salary** with a strong **benefits package, company vehicle** and **flexible working hours**, including home working.
