Acoustics Consultant / Senior Acoustics Consultant

Sixense is a group of companies providing specialist engineering services for the construction, civil engineering and infrastructure management markets. With over 700 employees present in 20 countries, Sixense is one of the major players in the digital revolution taking place in the construction and management of infrastructure.

Our acoustics business is one of our most established and fastest growing areas of expertise. Based in London Bridge, our UK acoustics team supports an impressive project portfolio including Crossrail, Thames Tideway and HS2, as well as risk monitoring and critical advisory roles for infrastructure operations and sensitive urban developments. Whilst our largest projects are currently in construction management, other key markets include planning, architectural acoustics, transport, industry and wind farms.

An opportunity has arisen for an accomplished professional to join our diverse but close-knit and friendly team in an integral role to build on our current sustained business success. With exciting project and professional prospects, this is an excellent career-development opportunity for an ambitious and self-motivated individual who is driven by making a difference through innovation and teamwork.

You may be an ambitious engineer looking to take a step up, or you may have a wealth of experience. If you are confident in your abilities, have an entrepreneurial outlook and a drive to progress, we would love to hear from you.

In return, we can offer an interesting and sociable work environment, exposure to a range of exciting and challenging projects, as well as broader business operational support to help you with your development as an acoustician and as a business professional. We offer a competitive salary and benefits package as you would expect from a leading engineering group.
