Acoustics Monitoring Engineer

London / South East England

Sixense Group is an international company providing specialist engineering services for the construction, civil engineering and infrastructure management markets. Part of the VINCI Group, a world leader in concessions, construction and related services, Sixense has over 700 employees present in 20 countries and is one of the major players in the digital revolution taking place in the construction and management of infrastructure.

Our acoustics and environmental business is one of our most established and fastest growing areas of expertise. Bringing a unique combination of twin expertise in both consulting and monitoring, and with one of the largest instrument fleets in the industry with over 400 systems, our acoustics department has a track record of delivering robust and innovative acoustic engineering services on some of the largest infrastructure projects in the UK, France, North America, Australia and New Zealand.

Specialising in working on major and complex projects, based in London Bridge, our UK environmental monitoring team supports an impressive portfolio including Crossrail, Thames Tideway and HS2, as well as risk monitoring and critical advisory roles for infrastructure operations and sensitive urban developments.

About the Role: An opportunity has arisen to join our diverse but close-knit and friendly team in an integral role within the acoustics and environmental monitoring division. With exciting project and professional prospects, this is an excellent career-development opportunity for an ambitious and self-motivated individual who is driven by making a difference through innovation and teamwork.

Applicants should have an acoustics qualification and be experienced in the monitoring of noise and vibration, preferably within the construction sector.

In return, we can offer an interesting and sociable work environment, exposure to a range of exciting and challenging projects, as well as broader business operational support to help you with your development. We offer a competitive salary and benefits package as you would expect from a leading engineering group.
