FOREWARD

Welcome to the 1st International Conference on Detection and Classification of Underwater Targets organised by the Institute of Acoustics. This conference was seen as timely since the accurate detection and identification of underwater targets continues as a major issue, despite, or as a result of, the promise of higher resolution underwater imaging systems. With the increasing deployment of Autonomous Underwater Vehicles for mine countermeasures applications, the automated processing of the large volumes of data gathered by these vehicles to detect and classify targets has become a critical task. Numerous techniques have been proposed for Computer Aided Detection (CAD) to detect all possible mine-like objects, and Computer Aided Classification (CAC) models to classify whether the detected object is a target or not. The question remains as to whether the perfect technique can be found for all applications, or whether the answer lies in collaboration and data fusion.

The detection of objects is hampered in environments such as shallow water or in regions of complex cluttered seabeds with rock outcrops or seaweed. The design of targets is also becoming more sophisticated to hamper detection with cladding to disguise the shape of the target or attenuate the reflection. One of the most complex to detect are buried targets and the problems of detecting these using conventional systems suggests that a novel approach is required using new sensors, signals or multi-static deployment techniques.

The conference aims to address these problems and considers the entire process of detection and identification, encompassing the design of sensors to aid detection, deployment strategies, signal design, target scattering as well as CAD/CAC processing algorithms. It will also encompass diver detection, harbour surveillance and marine mammal detection as well as detection of mine like targets.

I wish to thank all the contributors for providing such a wide range of interesting and innovative material and especially acknowledge the help of the referees while preparing the manuscripts. Special thanks to Yvan Petillot, Dave Lane, Keith Brown and Ron McHugh at Heriot-Watt for their help with the organisation, the Technical Programme Committee for their input and to our sponsors, who have enabled us to produce the printed proceedings in addition to the electronic version.

CONTENTS

CAD/CAC PROCESSING ALGORITHMS

- 1 Automated sea mine detection, classification, and fusion in high resolution sonar imagery**
Gerald J Dobeck, Naval Surface Warfare Center, Panama City, USA
Invited Keynote Paper
- 3 Computer-aided detection and classification of sidescan sonar images from the Citadel trial**
J A Fawcett¹, M Couillard², D Hopkin¹, A Crawford¹, V Myers³, B Zerr⁴, ¹DRDC Atlantic, ²University of Western Ontario, Canada, ³NATO Undersea Research Centre, Italy, ⁴GESMA, France
- 11 Combining model-based and in-situ performance prediction to evaluate detection & classification performance**
J Gazagnaire¹, P Beaujean², J Stack¹, ¹Naval Surface Warfare Center, USA ²Florida Atlantic University, USA
- 19 PATT: A performance analysis and training tool for the assessment and adaptive planning of Mine Counter Measures (MCM) operations**
S Reed, Y Petillot, A Cormack, Seebyte Ltd, UK
- 29 Automatic target recognition for the HUGIN mine reconnaissance system**
Ø Midtgaard, P E Hagen, Norwegian Defence Research Establishment (FFI), Norway
- 37 Estimation of 3D shape from high resolution sonar imagery for target identification**
E Coiras, J Groen, V Myers, B Evans, NATO Undersea Research Centre, Italy
- 45 Identification of underwater man made object using colour**
S Bazeille, I Quidu, L Jaulin, ENSIETA, France
- 53 Realization of a basic automatic detection and classification module for a MCM AUV**
K Siantidis and U Hölscher-Höbing, ATLAS ELEKTRONIK, Germany
- 61 The application and demonstration of classification techniques for torpedoes**
S C Thorpe, QinetiQ, UK
- 69 Image enhancement in synthetic aperture sonar**
R E Hansen¹, J Groen², H J Callow¹, ¹Norwegian Defence Research Establishment, Norway ²NATO Undersea Research Centre, Italy
- 77 Fusion of contacts in synthetic aperture sonar imagery using performance estimates**
V Myers¹, Ø Midtgaard², ¹NATO Undersea Research Centre, Italy, ²Norwegian Defence Research Establishment (FFI), Norway
- 89 Optimizing time-limited multi-aspect classification**
M Couillard¹, J A Fawcett², M Davison¹, V Myers³, ¹University of Western Ontario, Canada, ²DRDC Atlantic, ³NATO Undersea Research Centre, Italy

ENVIRONMENT/SEABED CLASSIFICATION

- 97 **Multiple scattering of acoustic waves in a bubbly liquid medium: Comparison between theoretical and experimental results.**
V Duro, D Décultot, G Maze, University of Le Havre, France
- 105 **Propagation-invariant classification of shallow water sonar signals**
G Okopal, P J Loughlin, University of Pittsburgh, USA
- 115 **Acoustic expression of sedimentary properties**
T Garlan, SHOM-Oceanographic Centre, France
- 123 **The significance of the number of independent parameters in Rayleigh mixture distributions**
N P Chotiros, Applied Research Laboratories, The University of Texas at Austin, USA
- 131 **Modelling wave propagation over long distances underwater with pseudospectral techniques**
P Reynolds¹, J-F Saillant², S Cochran², ¹Weidlinger Associates Inc, USA, ²University of Paisley, UK

TARGET SCATTERING

- 139 **High-frequency bistatic scattering on seabed and targets: Comparison of scaled and full-scale experiments with sea trials**
Ph. Blondel, N G Pace, University of Bath, UK
- 147 **Characterization of an immersed finite ribbed tube using inverse problem**
R Lietard, D Décultot, G Maze, University of Le Havre, France
- 155 **Detection and classification of an object buried in sand by an acoustic resonance spectrum method**
D Décultot, K Cacheleux, G Maze, University of Le Havre, France
- 163 **Practical implications of sonar target phase measurement classifiers**
P R Atkins¹, K G Foote², T Collins¹, ¹University of Birmingham, UK, ²Woods Hole Oceanographic Institution, USA

SENSOR DESIGN/ BEAM FORMING

- 173 **Improved transducer performance with new piezoelectric materials for underwater imaging**
M F Wallace¹, S Cochran¹, P Marin², K Mayne², M P Walsh², R Wright³ and R Marsh³,
¹University of Paisley, ²Piezo Composite Transducers Ltd, ³Tritech International Ltd, UK
- 181 **MOSAIC: A scalable, modular system for underwater ultrasonic imaging**
J F Saillant¹, S Triger², F Afroukh¹, J Wallace², L Wang², S Cochran¹ and D Cumming²,
¹University of Paisley, ²University of Glasgow, UK

- 189 **A real time FPGA implementation of a yaw stabilised beamformer for SAS, side-scan, and forward look mine-hunting sonars**
S Banks¹, R Hollett², S Charles¹, A Willcox¹, A Bellettini², ¹Bloomsbury DSP Ltd, ²NATO Undersea Research Centre, Italy
- 201 **A robust algorithm for reverberation suppression in doppler sensitive transmissions**
N H Parsons, Thales Underwater Systems Ltd, UK

DIVER DETECTION/HARBOUR SURVEILLANCE/DEPLOYMENT

- 209 **Optimum sonar frequency for diver detection in harbours**
MEGD Colin, SP Beerens and MA Ainslie, TNO Defence Security and Safety, The Netherlands
- 217 **Automatic ship hull inspection - The detection of mine-like targets in sonar data using multi-CAD fusion and tracking technologies**
P-Y Mignotte, S Reed, A Cormack, Y Petillot, Seebyte Ltd, UK
- 225 **Current deployment advisors and potential future developments**
C Schofield, M Reeve, BAE Systems Insyte, UK

BIO-INSPIRED/MAMMALS

- 233 **Initial results on size discrimination of similar underwater objects using a human hearing model**
PD Fox, S Bleack, PR White, TG Leighton, VF Humphrey, ISVR, University of Southampton, UK
- 241 **Detection, classification and localisation of marine mammals using active sonar returns**
S Ward, M Horsley, QinetiQ, UK
- 249 **Strategies for rapid target reacquisition: principles and theoretical advantages**
Y Pailhas, C Capus, K Brown, Heriot-Watt University, UK

POSTER PRESENTATIONS

- 257 **Tools for classification of mine-like objects in Synthetic Aperture Sonar Images**
J Engström¹, M Trieb¹, GA Shippey², ¹SAAB Underwater Systems, Sweden, ²Chalmers University of Technology, Sweden
